№ 1711/23-01

To whom it may concern

RECOMMENDATION LETTER

ADGEX Limited (hereinafter ADGEX) is a strategic business partner of us (Tokyo-Boeki and YOKOGAWA corporation) within the framework of the signed tripartite Cooperative Agreement signed in June 2017 by ADGEX, Tokyo-Boeki and YOKOGAWA in the field of development and promotion of a new approach to semiconductor manufacture to the international market: "development and production of chips and devices based on minimalFAB technology - modular equipment for cost-effective production of modern electronic components".

ADGEX is developing its own innovative marketing model named "AIDL (Agile Intellectual Device Laboratory) format", which differs from the current IDM format (Intellectual Device Manufacture). The AIDL is a way of modern digital production combining functions of fabless and foundry companies, but in contrast to the "classic" integrated IDM manufacturer, it is of considerably smaller dimensions – it is a small laboratory. A key component of AIDL is minimalFAB production line, which can be supplied by ADGEX.

ADGEX is one of the first companies in the world received the unique right to conduct joint promotion of minimalFAB complexes manufactured by Japanese consortium managed by Yokogawa Corporation. Establishing a long-term partnership with ADGEX was a big step for Tokyo Boeki in conducting promotion of compact minimalFAB units to Australia and Russian markets.

The next joint step of ADGEX under cooperation with Tokyo Boeki is development and promotion of a new modular approach to production of modern electronic components in the world market and opening of new centers of intelligent laboratories AIDL.

K.Takigawa
General Director
